

DUN & BRADSTREET CONNECTOR

Incorporating objective financial health assessments into your third-party risk management processes enhances due diligence by providing a multidimensional view of your third-parties' financial health. ProcessUnity offers a pre-built connector to Dun & Bradstreet's Direct 2.0 content feed and related data and analytics from multiple sources. The integration provides the financial status intelligence necessary to drive more-informed business decisions and reduce risk to your organization and clients.

The Service

The Dun & Bradstreet (D&B) Direct 2.0 content feed delivers four scores that serve as key indicators of financial status and the risks associated with doing business with a specific organization.

SSI Score: The Supplier Stability Indicator represents the probability that a supplier will experience significant financial stress over the next 90 days.

SER Score: The Supplier Evaluation Risk Rating predicts the likelihood a company will obtain legal relief from creditors OR cease operations without paying creditors in full over the next 12 months.

Failure Score: The Failure Score (also known as the D&B Insolvency Score) is a predictive indicator of business insolvency.

Rating Score/PAYDEX: The Rating Score/PAYDEX represents a dollar-weighted numerical score that reflects a company's payment performance as reported to D&B.

ProcessUnity's cloud-based third-party risk management solution identifies and remediates risks posed by third-party service providers. Combining a powerful vendor services catalog with centralized risk process automation and dynamic reporting, the platform streamlines third-party risk activities while capturing key supporting documentation to ensure compliance and fulfill regulatory requirements. Integrating D&B Direct 2.0 scores into the ProcessUnity Third-Party Risk platform, gives you enhanced visibility into financial risks associated doing business with third-party organizations.

The Integration

ProcessUnity offers a pre-built connector that seamlessly integrates D&B Direct 2.0 content into our Third-Party Risk Management platform — eliminating the need to manually enter information while also enabling you to continuously monitor each organization. The connector allows you to view current D&B scores directly within the ProcessUnity platform without having to move back and forth between a financial assessment solution and your risk management platform. Notifications can be configured to send emails when a score drops to defined thresholds to ensure organizations aren't adversely affected by changes to their vendor's financial standing.

The Dun & Bradstreet Connector lets you achieve integration quickly – eliminating lengthy waits for IT resource availability. You'll partner with our Customer Success organization to define the content you want to pull into the ProcessUnity platform (based on your D&B Direct 2.0 subscription) and the frequency of data transfer. Our experts will build the data import templates and help you configure the required reports. Once the connector is set up and active, D&B Direct 2.0 scores will be automatically populated within the ProcessUnity solution on a daily, weekly, monthly or quarterly basis to enhance your Third-Party Risk Management program.

The Requirements

ProcessUnity's Dun & Bradstreet Connector is available for an annual subscription fee and requires a D&B Direct 2.0 API license from Dun & Bradstreet. Your ProcessUnity representative will provide Dun & Bradstreet contact details upon request.
