PROCESSUNITY CONNECTORS

As a standalone solution, ProcessUnity's cloud-based third-party risk management platform delivers significant value by helping your organization streamline processes and effectively manage risk, cost, and complexity throughout the entire vendor relationship. It centralizes multiple processes and data sources into a single, manageable platform, applies automation to standardize workflows and enables the capture of key supporting documentation to ensure compliance and fulfill regulatory requirements.

Want to make this powerful platform even more impactful? ProcessUnity offers plug-and-play connectors that increase the value of your third-party risk management solution by speeding and simplifying the integration of external content and data.

Enhance your third-party risk management program

Augment your third-party risk management process with richer content and specialized intelligence. By leveraging pre-built connectors, you can automatically integrate data from trusted providers with specific risk domain expertise — in security, financial status, reputation and more — into the ProcessUnity workflows and reports to manage and monitor risk. That way, you gain more complete visibility into the risk profile of third parties while reducing the manual effort required for due diligence.

Our growing set of connectors enables you to:

- Automate the collection of external security, financial and reputational risk data

- Supplement your data with deeper content from trusted authorities and domain experts

- Obtain objective validation of your security, financial and/or reputational assessments

- Continuously monitor third-party vendors between your internal assessments

- Reinforce the credibility of your assessments with internal auditors and external regulators

ProcessUnity

Accelerate integration with external data providers

Avoid costly, lengthy, and potentially unsuccessful integration projects. Our pre-built connectors, available for an annual subscription fee, enable you to integrate with external data sources quickly and seamlessly to further streamline risk processes.

You'll partner with our Customer Success team to define the attributes to collect and the schedule for data transfer. Based on discovery, our experts will implement the connector to meet your specific business requirements. ProcessUnity continuously supports and enhances our connectors to ensure optimal performance and reliability.

In order to implement a pre-built connector, your organization must license or subscribe to the external content source or data aggregator in question. These licenses or subscriptions are executed directly with the data provider. ProcessUnity can provide contact details upon request.
Ready to get connected?
