

RAPIDRATINGS CONNECTOR

Incorporating objective financial health assessments into your third-party risk management processes provides more complete visibility into businesses for more rigorous due diligence. That’s why we offer a pre-built connector to RapidRatings, which uses a unique quantitative analytics model to measure the financial health of public and private companies. This objective insight into the financial viability of third parties helps you make better business decisions and meet regulatory requirements.

The Service

RapidRatings provides empirical ratings — uninfluenced by company bias —which serve as accurate and predictive indicators of a company’s financial viability, operational efficiency, and resilience. Using a combination of advanced analytics and proprietary algorithms, RapidRatings produces two key measures of both public and private company’s financial health:

- Financial Health Rating (FHR®): A single number from 0-100 that indicates the probability of default within 12 months
- Core Health Score: A measurement that reflects operational efficiency and long-term sustainability

ProcessUnity’s cloud-based third-party risk management solution identifies and remediates risks posed by third-party service providers. Combining a powerful vendor services catalog with centralized risk process automation and dynamic reporting, the platform streamlines third-party risk activities while capturing key supporting documentation to ensure compliance and fulfill regulatory requirements. To learn more about Third-Party Risk Management, go to www.processunity.com/automate.

By integrating RapidRatings scores into the ProcessUnity Third-Party Risk platform, you gain forward-looking visibility into financial risks associated doing business with third-party public and privately held organizations.

The Integration

ProcessUnity offers a pre-built connector that seamlessly integrates RapidRatings content into our Third-Party Risk Management platform — eliminating the need to manually enter and continually update information on each organization. The connector allows you to view RapidRatings scores directly within the ProcessUnity platform without having to move back and forth between a financial assessment solution and third-party platform. The scores obtained from RapidRatings can also be included in any proprietary scoring methodologies your organization may have.

The RapidRatings Connector lets you achieve integration quickly — typically in less than eight hours — eliminating lengthy waits for IT resource availability. You'll partner with our Customer Success organization to define the content you want to pull into the ProcessUnity platform (based on your RapidRatings subscription) and the frequency of data transfer. Our experts will build the data import templates and configure the required reports. Once the connector is set up and active, RapidRatings scores will be automatically populated within the ProcessUnity solution on a pre-defined schedule to enhance your Third-Party Risk Management program.

The Requirements

ProcessUnity's RapidRatings Connector is available for an annual subscription fee and requires a data and API licenses from RapidRatings. Your ProcessUnity representative will provide RapidRatings contact details upon request.
