

# PROCESSUNITY VENDOR FINANCIAL INTELLIGENCE WITH RAPIDRATINGS

ProcessUnity's Vendor Risk Management software protects companies and their brands by reducing risks from third-party vendors and suppliers. Our program helps customers effectively and efficiently assess and monitor both new and existing vendors – from initial due diligence and onboarding to termination. Through automation and standardization, ProcessUnity customers reduce busy work, streamline regulatory reporting, and improve overall visibility into vendor performance. To learn more about Third-Party Risk Management, go to [www.processunity.com/automate](http://www.processunity.com/automate).

ProcessUnity Vendor Financial Intelligence (VFI) with RapidRatings seamlessly incorporates RapidRatings' financial health ratings into ProcessUnity's Vendor Risk Management platform. VFI combines objective financial health information into third-party risk management processes to provide greater visibility into businesses for pre-and post-contract vendor due diligence. During vendor onboarding and throughout the vendor relationship, RapidRatings financial health information combined with ProcessUnity's assessment engine provides continuous insight into the validity of vendors' financial posture and overall risk to the business.

Vendor Financial Intelligence includes the ProcessUnity Vendor Risk Management Platform, the ProcessUnity RapidRatings Connector, RapidRatings' financial health information and a combination of pre-built workflows, notifications, reports and dashboards.

## Solution Components

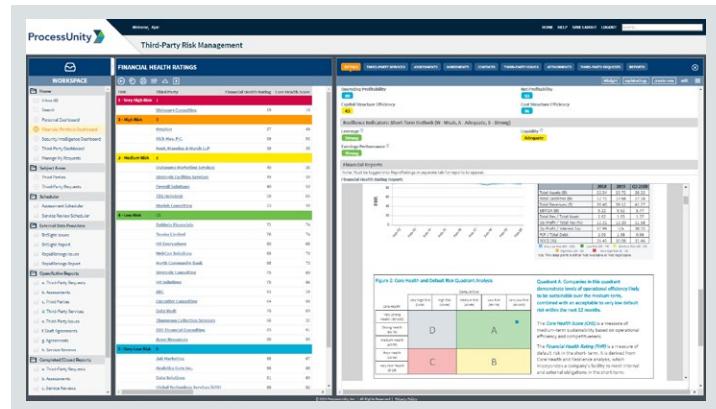

Vendor Financial Intelligence is comprised of four key components: ProcessUnity Vendor Risk Management, RapidRatings financial health information, the ProcessUnity RapidRatings Connector, and a combination of pre-built workflows, notifications, reports and dashboards that power enhanced third-party due diligence, vendor assessments, issue management and ongoing monitoring processes.

RapidRatings provides empirical ratings — uninfluenced by company bias — which serve as accurate and predictive indicators of a company's financial viability, operational efficiency and resilience. Using a combination of advanced analytics and proprietary algorithms, RapidRatings produces two key measures of both public and private company's financial health:

- Financial Health Rating (FHR®): A single number from 0-100 that indicates the probability of default within 12 months
- Core Health Score: A measurement that reflects operational efficiency and long-term sustainability

RapidRatings uses a unique quantitative analytics model to measure the financial health of public and private companies. This objective insight into the financial viability of third parties informs business decisions and helps companies meet regulatory requirements. Integrating RapidRatings data into the ProcessUnity Vendor Risk Management platform provides forward-looking visibility into the financial risks associated with doing business with third-party public and privately held organizations.

ProcessUnity's connector seamlessly integrates RapidRatings Financial Health Rating and Core Health Score using a vendors' ID. The connector presents these financial ratings directly within the ProcessUnity platform, eliminating the need to access multiple applications or manually enter risk information and calculations for each organization. The scores obtained from RapidRatings are incorporated into inherent risk scores to help inform assessment scoping and frequency to inject more intelligence and objectivity into the onboarding process. Third-party risk managers are notified of any changes in the vendor's financial ratings and automated workflows are initiated for continuous, ongoing vendor monitoring, issue creation and management.

The Vendor Details tab shows the individual risk scores and Financial Health Report for a vendor within the ProcessUnity platform to easily incorporate financial information into the review process for a more thorough vendor evaluation.

Vendor Financial Intelligence is built on ProcessUnity's Best Practices Configuration for Vendor Risk Management – a complete, proven third-party risk program with turn-key workflows, assessments, calculations, risk analysis and reporting. Developed by Third-Party Risk Management subject matter experts and perfected via hundreds of successful customer implementations, Best Practices Configuration delivers a complete, "out-of-the-box" program with a high-quality, systematic and repeatable assessment process that improves communication between lines of business, third-party risk analysts and third-party contacts to ultimately drive risk out of an organization.

ProcessUnity's Best Practices Configuration employs industry-standard questionnaires from Shared Assessments (SIG Core and SIG Lite) to further streamline the vendor assessment process. The financial intelligence provided by VFI, coupled with the risk intelligence from the SIG questionnaire, gives analysts a wider view of potential risks for a more thorough vendor evaluation.

Third-party risk analysts monitor vendor financial risk and screening coverage via interactive dashboards and reports.

## Interactive Dashboards & Reports

ProcessUnity Vendor Financial Intelligence provides a real-time, holistic view of the financial risk across vendor populations through pre-built interactive reports and dashboards. Drill-down capabilities allow users to quickly find the details in any areas of concern while ProcessUnity's extensive custom reporting capabilities enable the creation of role-specific reports to demonstrate to executives and regulators the existence of a consistent, reliable and repeatable program.

With built-in integration to RapidRatings' financial health ratings, VFI gives third-party risk teams a complete Third-Party Risk Management solution that deploys in a matter of weeks. These four components combine to provide critical insights into a third party's financial posture, strengthening the relationship between a business and its vendors, third parties and suppliers.
