# PROCESSUNITY VENDOR ESG INTELLIGENCE WITH ECOVADIS

ProcessUnity's Vendor Risk Management software protects companies and their brands by reducing risks from third-party vendors and suppliers. Our program helps customers effectively and efficiently assess and monitor both new and existing vendors – from initial due diligence and onboarding to termination. Through automation and standardization, ProcessUnity customers reduce busy work, streamline regulatory reporting and improve overall visibility into vendor performance. To learn more about Third-Party Risk Management, go to www.processunity.com/automate.

ProcessUnity Vendor ESG Intelligence (VEI) with EcoVadis seamlessly integrates business sustainability ratings for Environment, Labor & Human Rights, Ethics and Sustainable Procurement into ProcessUnity's Vendor Risk Management platform to provide greater visibility into the onboarding and continuous monitoring of vendors and suppliers throughout their entire lifecycle. By incorporating transparency, sustainability performance and supply chain benchmarking, ProcessUnity VEI provides third-party risk managers with critical insights into a third party's ESG posture, strengthening the relationship between a business and its vendors, third parties and suppliers.

EcoVadis Connector

Solution Components

ProcessUnity Vendor ESG Intelligence is comprised of four key components: ProcessUnity Vendor Risk Management, the ProcessUnity EcoVadis Connector, EcoVadis' business sustainability ratings and a combination of pre-built workflows, notifications, reports and dashboards that power enhanced third-party due diligence, vendor assessments, issue management and ongoing monitoring processes.

EcoVadis rates sustainability performance by assessing a company's policies, actions and results, as well as inputs from third-party professionals and external stakeholders across seven management indicators and 21 sustainability criteria, in four key themes:

- ⊕ Environment
- ⊕ Labor & Human Rights
- ⊕ Ethics
- ⊕ Sustainable Procurement

Operating at a global level, EcoVadis considers regional regulations and languages while also incorporating industry labels and certifications or the individual standards of a company or organization. EcoVadis accounts for a company's own documentation, third party inputs like labels and certifications, as well as external news sources like watch lists and databases to give procurement and sustainability teams immediate ESG risk insights across their entire supply base.

This robust risk visibility across all suppliers enhances third-party due diligence, vendor assessments, issue management and ongoing monitoring processes by providing actionable insights into environmental, social and ethical risks. ProcessUnity VEI lends insight into the vendor's biodiversity, pollution issues, product use and end of life practices, employee health and safety, modern slavery, human trafficking violations, corruption, anticompetitive practices and more.

ProcessUnity seamlessly integrates EcoVadis' sustainability ratings into its leading vendor risk management platform using a pre-built connector - eliminating the need to manually enter or recalculate rating and streamlining the vendor review process within one application. Analysts are presented with real-time EcoVadis reports and can review the full details behind each assessment. Additionally, the analyst can request a new assessment within the ProcessUnity platform. These ratings and scores from EcoVadis are paired with the overall risk calculation inside ProcessUnity to lend insight into a supplier's environmental and social practices and overall risk to the business.

Vendor ESG Intelligence is built on ProcessUnity's Best Practices Program for Vendor Risk Management – a complete, proven third-party risk program with turn-key workflows, assessments, calculations, risk analysis and reporting. Developed by Third-Party Risk Management subject matter experts and perfected via hundreds of successful customer implementations, ProcessUnity's Best Practices Program delivers a complete, "out-of-the-box" solution with a high-quality, systematic and repeatable assessment process that improves communication between lines of business - third-party risk analysts and third-party contacts - to ultimately drive risk out of an organization. With built-in integration to EcoVadis' sustainability ratings, VEI supports third-party risk teams with a complete Third-Party Risk Management solution that deploys in a matter of weeks.

ProcessUnity

Third-party risk analysts can complete an EcoVadis Assessments request directly within the ProcessUnity platform to expedite the onboarding process.

Interactive Dashboards & Reports

ProcessUnity Vendor ESG Intelligence provides a real-time, wholistic view of the risk across vendor populations through pre-built interactive reports and dashboards. Drill-down capabilities allow users to quickly find the details in any areas of concern while ProcessUnity's extensive custom reporting capabilities enable the creation of role-specific reports to demonstrate the existence of a consistent, reliable and repeatable program to executives and regulators.
