

# ProcessUnity TPRM Platform

ProcessUnity delivers a configurable workflow platform that automates the entire TPRM lifecycle. Teams deploy out-of-the-box programs quickly or tailor automation to unique workflows. With pre-configured integrations to fit your stack, timeline, and budget, and access to ProcessUnity Global Risk Exchange data, risk managers gain complete visibility into third-party risk. Context-embedded AI accelerates reviews and prioritizes your riskiest third parties, elevating program efficiency.

## Access to the World's Largest Assessment Exchange

Built-in access to the ProcessUnity Global Risk Exchange opens up the world's largest network of attested assessments (more than 18,000) and Automated Risk Profiles (more than 370,000) to reduce assessment timelines and get you to 100% portfolio coverage.

## Targeted Scoping & Smart Assessments

You don't need to do more assessments. You need to be more precise about which questions you ask. ProcessUnity scopes questionnaires based on inherent risk and vendor criticality, so you ask only what matters (and what's missing) and keep responses actionable.

## AI-Powered Control Reviews

Slow document review processes exacerbate assessment backlogs. With ProcessUnity's AI-powered Evidence Evaluator, TPRM teams can quickly review the control evidence, accelerating decisions without sacrificing rigor.

## Automated Monitoring Cadence

Manual follow-ups stall progress. ProcessUnity schedules reassessments by vendor criticality, flags responses that warrant review, and keeps your due diligence schedule on track.

## Connect Any TPRM Workflow to the Systems You Already Run

ProcessUnity Integrations deliver prebuilt, expert-managed, two-way connectors that move the right data in and out of the ProcessUnity TPRM Platform. Keep risk, vendor, and contract data consistent across all systems.

## Complete Risk Visibility

Fragmented data slows risk analysis and creates redundancy. ProcessUnity centralizes questionnaires, documents, communications, external feeds, and enterprise data into a single source of truth so you can answer the right questions fast.

# ProcessUnity Global Risk Exchange

The Global Risk Exchange from ProcessUnity couples vendor-attested “inside-out” assessments with outside-in ratings and threat intelligence for a 360-degree view of a third party, then feeds that intelligence into your TPRM platform for quick decisions. Nightly refreshes of Automated Risk Profiles keep risk data up to date in between assessments.

## Assess-Once, Share-Many Efficiency

Duplicate questionnaires drain time. Use completed, attested assessments from 18,000+ vendors to cut cycles and focus on analysis, not collection.

## 100% Portfolio Coverage

Your team can't perform an in-depth assessment for every vendor. Leverage 370,000+ Automated Risk Profiles to extend visibility and prioritize deeper assessments where you need them.

## Inside-Out + Outside-In Confidence

External scores alone lack the much-needed context provided by your third parties. Combine attested controls with outside-in scanning and threat intel to build a reliable, validated picture of risk.

## Always-On Threat Readiness

Emerging vulnerabilities can't wait. Activate Threat Profiles and real-time NIST CVE/CWE alerts to pinpoint third- and fourth-party exposure immediately.

## Frictionless Workflow Integration

Third-party risk data combined with workflow automation ensures maximum TPRM effectiveness. Embed Exchange intelligence in ProcessUnity's TPRM Platform or route it into your environment via our flexible API.

ProcessUnity Global  
Risk Exchange

ProcessUnity is **the** Third-Party Risk Management (TPRM) company. Our software platforms and data services protect customers from cybersecurity threats, breaches, and outages that originate from their ever-growing ecosystem of business partners. By combining the world's largest third-party risk data exchange, the leading TPRM workflow platform, and powerful artificial intelligence, ProcessUnity extends third-party risk, procurement, and cybersecurity teams so they can cover their entire vendor portfolio. With ProcessUnity, organizations of all sizes reduce assessment work while improving quality, securing intellectual property and customer data so business operations continue to operate uninterrupted.
